Outline

- Motivation
- Alternative operating systems
- Where to get hardware
- Architecture of mobile operating system
- Development
- Demo

Motivation

openmoko

neo

Motivation

- Do it your self
 - learn something
- Special needs
 - Create new concept / add some extra feature / very special hardware
- Security
 - how we can trust to Chinese/Russian/US/* product?
- Longevity
 - security updates are available ~ 2 – 6 years depending on vendor
- Vendor lock-in
 - US Export laws
- Privacy
 - Is that paranoia?

Kernel support for Mobile Linux: The missing 20%

- $\geq 80\%$ of functionality is working for lots of devices
- What's commonly missing?
 - Cameras, Battery fuel gauge driver, Phone calls / mobile data, A subsection of essential functionality
- Bringup is quite straightforward for recent devices
- Getting some functionality upstream is difficult
- Functionality & Reliability

Cocoa / Cocoa Touch

UIKit

GameKit

MessageUI

MapKit

Media

Core Image

Boot

- FSBL (hardware ROM)
- Bootloader
 - u-boot (blob, bootldr, redboot, able, etc.)
- Kernel
 - Haliu (libhybris)
- Device tree / EFI
- Initramfs
- Rootfs + Systemd (SYS V init)
- Bootstrapping
 - chicken or the egg problem
 - Limited resources
- Requirements
 - Keyboard vs. Volume keys vs Touch screen only
 - charging

User space

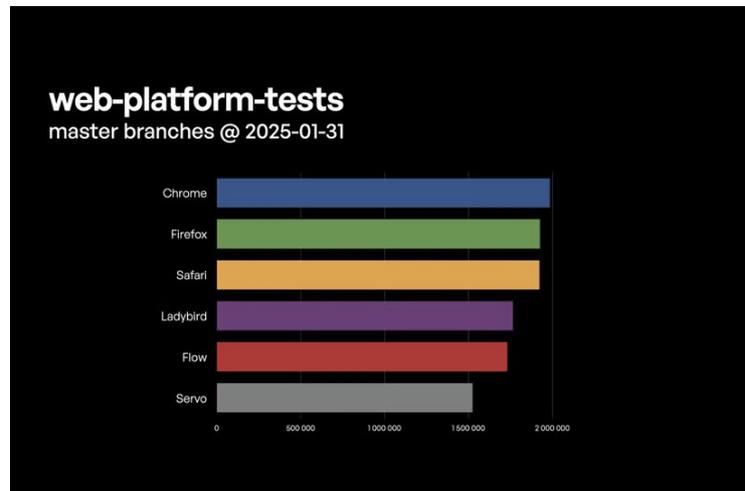

- GUI – ~~Framebuffer, XOrg~~, Wayland
 - On-screen keyboard (maliit, squakboard, ...)
 - Not rectangular screens (camera notch, circular screen - watches)
- Modem / Networking
 - oFono, Modem Manager, AT+?, QMI (Qualcomm modem iface), VoLTE
- Audio - PulseAudio profiles (/ ALSA / PipeWire)
- Applications
 - Native apps, Flatpak, Waydroid, Browser

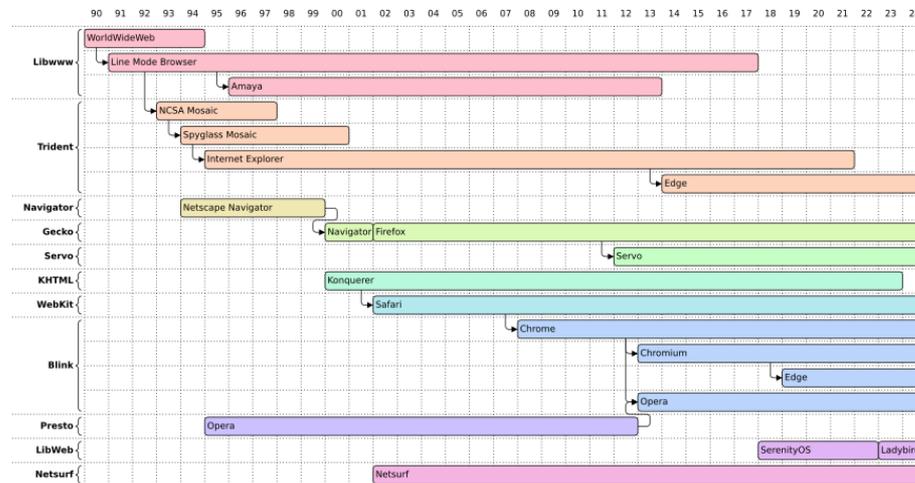

Source: <http://opensignal.com/reports/2014/android-fragmentation/>

The last mile of a marathon is tough

- Browsers are hard
 - Embedded apps (electron)
 - Tons of APIs (bluetooth, serial, storage, camera, webgl, video)
- mobile-config-firefox

	Gecko	Webkit	Blink
Phosh	Firefox	Epiphany WebKitGTK	Chromium QtWebEngine
Plasma Mobile			Chromium QtWebEngine Angelfish, Maui-Fiery
Ubuntu Touch		Mimi WPE	Morph, Sapot QtWebEngine
Sailfish OS	Sailfish Browser Sailfish WebView		

Android based OS Comparision and/or Waydroid

Based on

Freedom

Free and open source (FOSS)?
Deblobbed?

Features

Network controls for apps
Network-based location (without GNSS)
System-wide connection/tracker blocking
E2E-encrypted phone backups
Notification forwarding from other user profiles
Dress PIN (to wipe device)
Android Auto compatible
Google Play compatible

Degoogling (connections to Google) colours

eSIM activation
Provider for network-based location
SUPL (for Assisted GNSS)
PSDS/XTRA ("Standard" depends on GPS chipset)
Connectivity check/captive portal
DNS connectivity check
DNS server fallback
Network time
Hardware attestation provisioning
DRM (Widevine) provisioning

Google Play Services

Implementation
Optional?
Runs in standard app sandbox?
Can be limited to user or work profile?
Signature spoofing needed/allowed?
Push notifications via Google FCM?
Google Play Integrity?

Privacy

Storage scopes
Contact scopes
Per-app sensor controls
Per-connection DHCP state flushing
MAC address randomization
SUPL: IMSI or phone number sent?
Qualcomm XTRA: user agent sent?
Closed cross-profile package leaks?
Closed device identifier leaks?
Metadata stripping for screenshots
EXIF metadata stripping for photos
Location tagging for photos
Tracking through Android Advertising ID?

Security

Verified boot (if supported by device)?
Hardware-based security verification
System app downgrade protection
Secure application spawning?

	GrapheneOS	CalyxOS	IodéOS	/e/	LineageOS	"Stock" Android
						
	AOSP	AOSP	LineageOS	LineageOS	AOSP	AOSP

Network time	GrapheneOS default, or none	Google (can be changed) & carrier	NTP.org (can be changed) & carrier	NTP.org (can be changed) & carrier	Google (can be changed) & carrier	Google (can be changed) & carrier
Hardware attestation provisioning	GrapheneOS default, or Google	Google	Google	Google	Google	Google
DRM (Widevine) provisioning	GrapheneOS default, or Google	Google	Google	Google	Google	Google
Implementation	GmsCompat (sandboxed Google Play)	microG	microG	microG	None by default. It's possible to install microG manually (LineageOS supports signature spoofing for microG since 2024). Alternatively, there are ROMs with microG preinstalled or one can add Google apps during the installation process, but this is not officially supported by LineageOS.	Google Play Services
Optional?	Yes (not preinstalled)	Yes (preinstalled but opt-out)	Yes (preinstalled but opt-out)	No (preinstalled without opt-out)	manually (LineageOS supports signature spoofing for microG since 2024). Alternatively, there are ROMs with microG preinstalled or one can add Google apps during the installation process, but this is not officially supported by LineageOS.	No (preinstalled without opt-out)
Runs in standard app sandbox?	Yes	No	No	No	manually (LineageOS supports signature spoofing for microG since 2024). Alternatively, there are ROMs with microG preinstalled or one can add Google apps during the installation process, but this is not officially supported by LineageOS.	No
Can be limited to user or work profile?	Yes	Yes	? (TBC)	? (TBC)	manually (LineageOS supports signature spoofing for microG since 2024). Alternatively, there are ROMs with microG preinstalled or one can add Google apps during the installation process, but this is not officially supported by LineageOS.	No
Signature spoofing needed/allowed?	No	Only for Google signature	Only for Google signature	Only for Google signature	manually (LineageOS supports signature spoofing for microG since 2024). Alternatively, there are ROMs with microG preinstalled or one can add Google apps during the installation process, but this is not officially supported by LineageOS.	No
Push notifications via Google FCM?	Yes	Optional	Optional	Optional	manually (LineageOS supports signature spoofing for microG since 2024). Alternatively, there are ROMs with microG preinstalled or one can add Google apps during the installation process, but this is not officially supported by LineageOS.	Yes
Google Play Integrity?	Passes Basic Integrity only, see here	Passes Basic Integrity only	No but basic integrity expected soon	No but basic integrity expected soon	manually (LineageOS supports signature spoofing for microG since 2024). Alternatively, there are ROMs with microG preinstalled or one can add Google apps during the installation process, but this is not officially supported by LineageOS.	Yes
Storage scopes	Yes, see here	No	No	No	No	No
Contact scopes	Yes, see here	No	No	No	No	No
Per-app sensor controls	Yes, see here	No	No	No	No	No
Per-connection DHCP state flushing	Yes	No	No	No	No	No
MAC address randomization	Per connection, see here	Per network	Per network	Per network	Per network	Per network
SUPL: IMSI or phone number sent?	No	No	No	No	No	Yes
Qualcomm XTRA: user agent sent?	No	Partially (for Qualcomm chips)	Partially (for Qualcomm chips)	Partially (for Qualcomm chips)	Partially (for Qualcomm chips)	for Qualcomm GPS chips
Closed cross-profile package leaks?	Yes	No	No	No	No	No
Closed device identifier leaks?	Yes, see here	No	No	No	No	No
Metadata stripping for screenshots	Yes, see here	Yes, see here	No	No	No	No
EXIF metadata stripping for photos	Yes, see here	No	No	Available as option	No	No
Location tagging for photos	Opt-in	Opt-in, see here for more info	Opt-in	Opt-in	Opt-in	Opt-out
Tracking through Android Advertising ID?	Not part of the system	Randomized ID	Randomized ID	Randomized ID	Not part of the system	Yes, but can be deleted in settings
Verified boot (if supported by device)?	Yes, incl. system app updates	Yes, but excl. system app updates	Yes, but excl. system app updates	w/ test keys; excl. system app updates	No	Yes, but excl. system app updates
Hardware-based security verification	Yes, see here	No	No	No	No	Some devices, see here
System app downgrade protection	For updates and boot, with fs-verity	For updates (incomplete)	For updates (incomplete)	For updates (incomplete)	For updates (incomplete)	For updates (incomplete)
Secure application spawning?	Yes (exec)	No	No	No	No	No

Development

Compilation

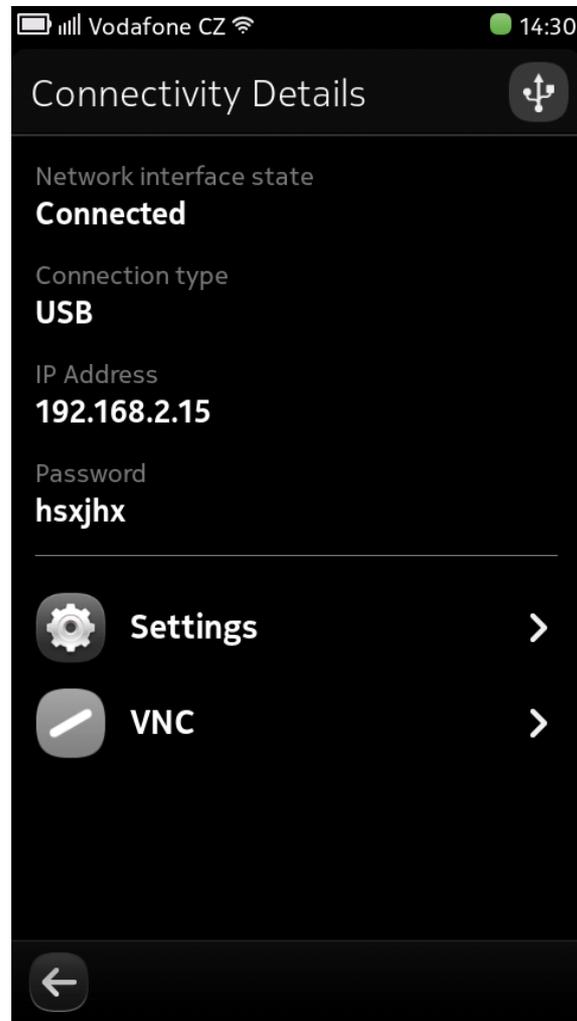

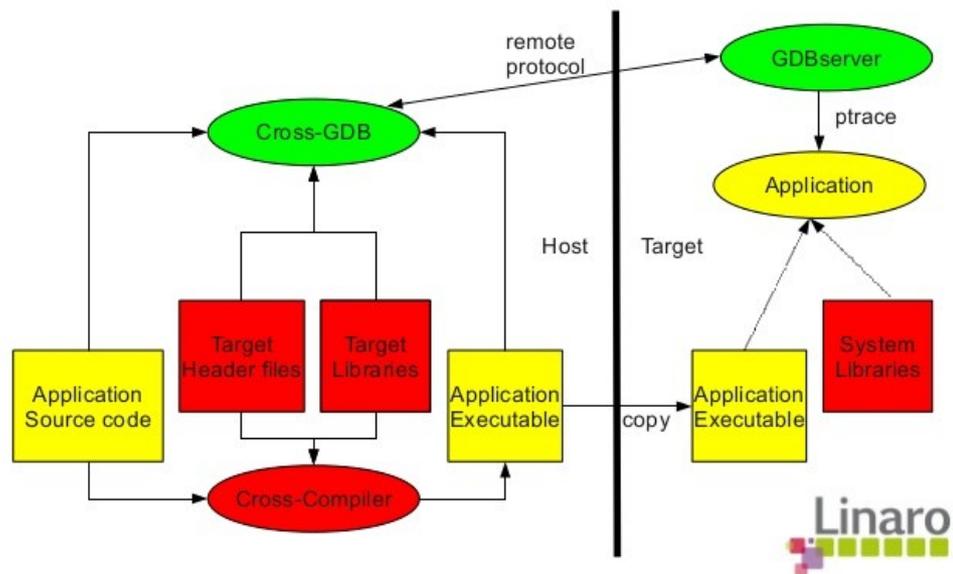

```
export CC=/usr/local/bin/arm-linux-gnueabi-gcc
export CFLAGS=-I /usr/local/arm_root/include
make
qmake myproject.pro -r -spec linux-g++-maemo
```

Remote debugging

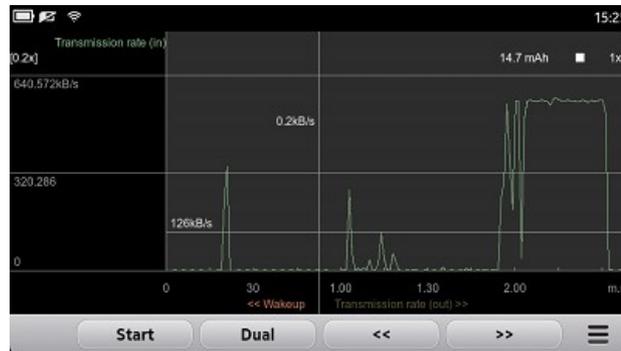

Remote debugging

Profiling

- Monitor
 - CPU load
 - Memory consumption
 - Network traffic
(change of IM timeout added +1h)
 - Number of waking up and suspends (C-states)
 - Frequency of CPU
 - Interrupts (IRQs)
(or NAPI)
- gproof, powertop, and much more
(perf cheat sheet)
- [1] SD card performance

Pro-tip: try to use “heartbeat” or Qt::VeryCoarseTimer to spare some CPU ticks.

Android AlarmManager.setInexactRepeating(..)

Demo: Clickable

- `sudo add-apt-repository ppa:bhdouglass/clickable`
- `apt install clickable`
- `clickable setup`
- `clickable create`
- `clickable build`
- `clickable desktop`
- `clickable build --arch arm64 --app --skip-review && clickable install --arch arm64 && clickable launch --arch arm64 && clickable logs --arch arm64`

Questions?
